

## Pre-wounded hooks description

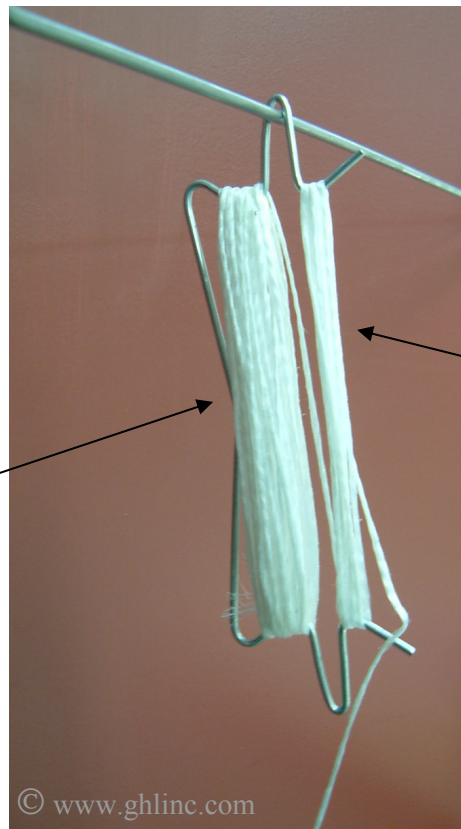

### Prices of pre-wounded hooks depend on:

- Number of hooks ordered
- Type of twine chosen
- Hook's dimension
- Twine's length for the reserve and the free-fall part

### There is an example with few explanations:

#### Step 2 : Reserve

Usually, people use this part called « reserve » to lower plants during the production time or to use for their next production period. We offer 180 and 220mm long hooks. The longer hook will make the plant lowered more efficiently during unrolling operations so less labour for unrolling will be necessary. (Labour-friendly).

#### Step 1 : Free-Fall

On this side there is the free-falling twine. The producer only has to pull the twine bundle on this side of the hook to make this part fall down all at once. The bundle can also be unrolled by hand...
